Course Description (course objectives and content):

This course presents a comprehensive conceptual framework for understanding people as consumers – the basic subject matter of all marketing. The purpose of this course is to study the process of consumer decision making and its determinants, and the resulting implications for marketing strategy. Concepts and theories covered in this course are essential for consumer analysis and the development of effective marketing strategies. Knowledge of consumer behavior requires an understanding of important theoretical concepts borrowed from fields such

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

Learning Objectives

A student who has taken this course should be able to:

- 1) Attain a thorough understanding of the consumer decision-making process:
 - a. Be familiar with the mental processes that guide consumer perceptions, attitudes, memory and choices
 - b. Be able to analyze how these processes might differ as a consequence of social, cultural and group influences
- 2) Apply this knowledge to generate effective marketing tactics
- 3) Provide recommendations if needed for public policy to protect consumer rights
- 4) Attain a broad understanding of experimental-based marketing research procedures

Textbooks & Reference Materials

- **Lecture Slides:**

Lecture slides will be posted on learn.tsinghua.edu.cn after each class. The slides will NOT be comprehensive of the material covered in class and do not substitute for attending class. Therefore, it is highly recommended that you attend all classes and take relevant notes in class as you may deem necessary.

- **Recommended Textbook (NOT required, optional):**

- Solomon, Michael R. (2019), Consumer Behavior: Buying, Having, and Being, 13th edition, Pearson (ISBN-13: 9780135642252).

* The textbook may not fully cover some topics and contents of this course. The instructor will provide additional materials, if necessary.

- **Cases and Academic Papers**

Some sections of the course involve case studies or academic journal readings. The instructor will make sure to upload the relevant reading materials on learn.tsinghua in advance.

Grading (percentage of all the assessment methods involved):

No.	Assessment method	Percentage
1	Participation	
2	Quizzes	
3	Individual assignment	
4	Academic Reading	
5	Group Project	
Total		100

Participation (10%)

Attendance is expected at all classes, presentations, and group meetings. Your participation grade

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

will be based on a) your attendance, b) the quantity and the quality of your contributions to class discussion, and c) your general professionalism. Also, if changes in exam procedure, exam date, exam coverage, assignments, etc. are announced in class, you are responsible for knowing this information. If you plan to attend a class, my expectation is that you will arrive on time, stay the full period, and be attentive and polite. You can earn participation points by actively participating in class discussions or any class events during the class sessions.

Quizzes (30%)

There will be 2 quizzes (closed book) at various points during the semester. The quizzes will consist of various types of questions, such as multiple-choice, true or false, fill in the blanks, short essays. All the questions will be based exclusively on class lectures and assigned readings. There will typically be no carryover of substantive topics for quizzes. However, it should be kept in mind that most topics in this course are interrelated; thus, answering questions relating to one particular topic may require some knowledge of topics discussed earlier. The date and venue of the quizzes will be announced one week in advance.

Individual assignment (20%)

You will have two individual homework assignments. These individual assignments intend to give you the opportunity to apply the concepts we will cover in class. I will grade your assignments based on (1) how well you follow the assignment instructions, (2) the overall thoughtfulness of the assignment or response, and (3) how well you integrate class materials into your assignments and responses. Specific instructions will be printed on the assignment in detail.

Academic Reading (10%)

Select a chapter topic and read a high-quality academic journal article related to the topic. You will be asked to complete a reading report. The content should include: (1) What are the main findings of the article? (2) Why are these findings significant? (3) What are the implications of these findings for marketing management? You will also be asked to translate your report into a 5-10-minute classroom presentation.

Group Project (30%)

For this assignment, you will select a consumer phenomenon from one of the following topics that is interesting to you. Your task will be to provide an explanation for this phenomenon by conducting a literature review primarily from academic journals and gathering primary data through a survey of consumers. In your report, you will include four key components: a description of the phenomenon and its significance for study, a comprehensive literature review, analysis of primary data collected from the survey, and an integration of your findings leading to a conclusion about why the phenomenon occurs. Finally, you will present your findings at the end of the semester, offering insights into the consumer phenomenon.

Topic 1: Technological advancements have greatly transformed consumer life. It is important to consider the changes in consumer behavior and the new challenges that have arisen due to technological developments. For example, how does buying from online live e-commerce differ from

traditional shopping? How has the use of big data altered consumer attitudes towards privacy? What unique aspects does virtual influencer offer in marketing? What behavioral changes and challenges are brought about by artificial intelligence? Etc.

Topic 2: Consumers and businesses are increasingly aware of the significance of sustainability. In relation to environmental sustainability, it is crucial to examine the factors that influence consumers' eco-friendly choices during the stages of product selection, usage, and recycling. Furthermore, it is essential to explore the practices that businesses can adopt to promote green consumption among consumers. Regarding personal financial sustainability, it is important to understand the factors that contribute to consumer overconsumption and the measures that consumers take to safeguard their personal financial well-being.

Topic 3: Both consumers and companies bear a certain level of social responsibility, often manifested through acts of altruism. In reality, there are noteworthy instances of altruistic behavior exhibited by both organizations and individuals. For example, the implementation of Corporate Social Responsibility (CSR) initiatives and donations made through charitable platforms. It is critical to explore the underlying motivations behind these acts of altruism.

Teaching Schedule (weeks, content, assignments. It can be in the tabular form.):

No.	Content
1	Welcome & Introduction to Consumer Behavior
2	Motivation and Goals
3	Perception: Exposure, Attention, and Interpretation
4	Learning and Memory
5	Attitudes and Persuasion
6	Judgement and Decision Making
7	Situational, Social, and Cultural Influences
8	Group Project Presentation

Course Description

Course Overview

This course introduces students to the fundamentals and advances of financial theory. Financial success is the ultimate motivation for modern economic activities, which are necessitated by financial resources. The needs of consumers and businesses have been evolving to exhaust the full capacity that the financial system provides. The development and sophistication of the financial system are thus a continual process. Consequentially, financial theory has been experiencing path-breaking advances along with the rapid development in financial practices. These developments are further accelerated by the extensive globalization of financial markets. This course provides an introduction to modern finance theory and its applications within a unified framework. The topics of the course include: (1) theory of capital structure; (2) valuation of assets; (3) theory of interest rates; (4) portfolio theory; (5) asset pricing models; (6) behavioral finance; (7) finance history.

Objectives

At the end of this course, a student should be able to: Describe how major global markets for financial securities function and discuss the mechanics of trading stocks, bonds, and options. Explain the function of simple and complex securities and the role of these securities in asset allocation.

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

Assess the risk and expected return for a security or portfolio using relevant historical information and forecasts. Assess ethical considerations that naturally arise during the process of financial management and investment analysis.

Course Description (course objectives and content):

Content:

This course provides a basic introduction to the field of data analysis and its applications in finance (or more broadly, business). Students will learn data analysis methods and techniques to transform data to knowledge and create value for organizations. Students will have extensive hands-on experience on data analysis software such as Stata.

The objectives of this course are:

- (1) Have a basic understanding of data analysis;
- (2) Learn how to use Stata for data analysis;
- (3) Enhance written and oral communication skills.

Course Description

Learning objectives and contents:

This course focuses on corporate valuation for making decisions to invest in business. It provides you with methods of fundamental analysis that will be discussed in details and applied in cases involving listed companies, private companies, equity issuances and acquisitions and restructurings. This course is highly recommended for students who intend to pursue a career in investment banking (particularly in equity research), security analysis, venture capital, and private equity. It will also help with personal investing. By the end of the course, the student should feel competent in writing a thorough and credible equity research

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

report or investment analyses that meet the highest standards of professionalism.

Textbooks & References:

(Required) Notes and assigned cases

(Optional) Financial Statement Analysis and Security Valuation, by Stephen Penman, Fifth Edition, McGraw-Hill, Irwin

(Optional) Investment Valuation: Tools & Techniques for Determining the Value of Any Asset, by Aswath Damodaran, Third Edition, John Wiley & Sons, Inc

(Optional) Valuation: Measuring and Managing the Value of Companies, by Tim Koller, Marc Goedhart, and David Wessells (McKinsey & Company Inc), Sixth Edition, John Wiley & Sons, Inc.

(Optional) Damodaran on Valuation, by Damodaran, Second Edition, John Wiley & Sons.

(Optional) The Dark Side of Valuation, by Damodaran, Third Edition, Financial Times Press. This valuation textbook covers advanced concepts concerning the valuation of young, distressed, and complex business.

(Optional) Principles of Corporate Finance by Brealey, Myers, and Allen, Eleventh Edition, McGraw Hill.

(Optional) Financial Accounting by Libby, Libby, and Short, Ninth Edition, McGraw Hill.

Class notes and handouts will be posted before the class. Please print them out and bring the notes and handouts related to the previous, current and next session during every class.

Reading the Financial Times, Wall Street Journal, and The Economist is highly recommended: it will benefit learning and conducting valuation projects in this course.

Grading (percentage of all the assessment methods involved):

Assessment Methods and Criteria

No.	Assessment Methods	Percentage
1	Class participation	20%
2	Three case assignments	30% = 3*10%
3	Final in-class quiz	25%
4	Final case presentation	25%

Requirements for Final Valuation Case Study

To help participants better understand the contents taught in class and valuation approaches and issues in practice, participants are required to study and analyze a firm's valuation for the final assessment. Specific requirements are as follows:

1. The case study should be carried out in learning groups.
2. Each group should choose an firm as an object of case study and then systematically analyze its valuation in details.
3. Participants are encouraged to choose companies of new economy, companies in new and emerging industries, or companies with innovative and special business models.
4. It is required to analyze the application and implementation of main valuation approaches taught in

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

class, such as the DCF approach, comparable company approach. The strengths and weaknesses of the application of these approaches should also be analyzed.

5. Each group should prepare a 10-minute class presentation and a written report.
6. The evaluation score of a group presentation, decided by the instructor and the participants in other groups, accounts for 15% of the final score. The score given by the instructor and the average score given by the participants from other groups (maximum score and minimum scores are excluded) account for 50% of the final score, respectively.
7. The score of written case study report accounts for 15% of the final score. Each group should submit an electronic version of the report to the teaching assistant. The report should be submitted one week after the class finishes.
8. Members in each group should give a score between 0 and 1 to each other according to their contribution to the final case study. Each individual member's final score for case study is the score of the group multiplied by his or her contribution coefficient, which is equal to the average of the scores given by other members within the same group.

Teaching Schedule (weeks, content, assignments. It can be in the tabular form.) :

Order of Classes/ Date	Content of Teaching	Required Reading Materials

Course Description (course objectives and content):

Chinese economy has transformed into a market-based economy while Chinese government still plays an important role in the economic system. Over the past forty years, in supporting the rapid growth of the economy, the financial system has developed into one with heavy concentration in banking while the capital market is getting into a fast-growing phase. Both fiscal policy and

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

monetary policy have experienced substantial changes along with the change of the role of the government. This course surveys crucial issues of the economic system in China including those from the international perspective. The course combines lectures and case studies to help students get a better understanding about Chinese economy, in particular, in comparison with developed market economies.

Course Description (course objectives and content):

Course objectives:

1. To equip the students with new knowledge/theories/insights drawn from leading

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

real business practices in key functional areas, with the emphasis on building students' capability for problem solving with deeper insights.

2. To provide the students with exposure/interaction with some distinguished business leaders for their leadership development, with the emphasis on helping students to understand broad yet concrete leadership concepts such as leading organizational change, driving innovation, and decision-making in crisis.

Highlights of course contents:

1. Prestigious lecturers. The course is intended to bring world-class business leaders (e.g., CEOs of globally renowned corporations, senior partners leading McKinsey global practices) into the classroom at Tsinghua SEM to have face-to-face sharing/interaction with students.
2. Cutting-edge functional thinking. The course is designed to convey deep insights on new trends across some key themes of business functions (e.g., strategy, operations, organization, corporate finance, marketing, artificial intelligence technology, sustainability, life science, and macroeconomics) with a field-and-forum approach.
3. Global perspectives. The course is scoped to discuss topics on a global level as well as those specifically related to China context.

Recommended Reading Materials

4. Ngai, J. (2024). 5 critical shifts Chinese firms need to make to be successful. <https://www.scmp.com/>

Additional references and pre-readings will be provided before each class.

Grading (percentage of all the assessment methods involved):

No.	Assessment method	Percentage
1	Class Participation	30%
2	Individual Reflection Journal	34%
3	Group Project	30%
4	Group Progress Log	6%

Class Participation

Each section will include a combination of keynote presentations, panel discussions, and a Q&A session with the class. There will be plenty of time for questions from the audience and conversations with participants. Please pay close attention to each section and be prepared for questions. Your engagement is welcomed, and your peers are eager to hear your insights as well!

Participation Grading Rubric. This rubric evaluates participation holistically, combining attendance, active participation, and preparation into a single category for a total of 300 points.

Grading Scale:

- 285 - 300 points
 - Full attendance, always on time, engaged throughout.
 - Consistently contributes thoughtful comments, engages deeply with the material, and asks relevant questions.
 - Always well-prepared, demonstrates a strong understanding of the class discussion, and engages actively with peers.
- 270 - 284 points
 - Missed 1 class but remains engaged and active in discussions.
 - Regularly participates in discussions with meaningful input and questions.
 - Prepared most of the time, with general understanding and occasional engagement with peers.
- 245 - 269 points
 - Missed 2 classes or late several times, participation is inconsistent.
 - Occasionally participates, with contributions that are generally relevant.
 - Usually prepared, with a good understanding of the class discussion and regular peer engagement.
- 220 - 244 points

*This syllabus is **only** for reference of your course selection, and the finalized version will be distributed by the instructor in class*

- Missed more than 2 classes or frequently late, minimal participation.
- Seldom participates, with minimal or off-topic contributions.
- Inconsistent preparation, limited understanding, and minimal peer engagement.
- Below 219 points
 - Frequently absent or late, little to no participation.
 - Rarely or never participates, with little to no contributions.
 - Frequently unprepared, lacks understanding, and rarely engages with peers.

Individual Reflection Journal

Assignment Overview:

For this assignment, you are required to write two reflection essays, each focusing on one week of speakers' presentations and discussions. Each essay has maximum of 150 points. Two essays will be 300 points for the whole journal.

In each essay, you should:

1. Discuss what you learned from the week's discussion and presentations. (50 points)
2. Compare this learning with your prior knowledge on the subject. (50 points)
3. Describe your plan to incorporate this knowledge in your future managerial career. (50 points)

Each essay should be thoughtful, well-structured, and demonstrate deep reflection on the topics discussed. Organization and writing quality will also be considered.

- Ensure your essay is well-organized, with clear transitions between sections.
- Write in a clear, concise, and professional manner with citations if appropriate.
- Use proper grammar, spelling, and punctuation.
- Adhere to the word limit (approximately 500-750 words per essay).

Grading Rubric:

- Outstanding (135-150 points per essay):
 - Demonstrates a deep and comprehensive understanding of the week's content.
 - Provides insightful comparisons with prior knowledge, showing significant reflection and growth.
 - Clearly articulates how the learning will be applied in a managerial context with concrete examples.
 - Essay is well-organized, with high writing quality.
- Excellent (120-134 points per essay):
 - Shows a strong understanding of the week's content, with some minor gaps.
 - Reflects on prior knowledge and identifies changes in perspective, though some connections may be less developed.
 - Discusses future application with relevant examples, though some may be less specific. - Essay is well-organized, with few errors in writing.

*This syllabus is **only** for reference of your course selection, and the finalized version will be distributed by the instructor in class*

- Satisfactory (105-119 points per essay):
 - Demonstrates a basic understanding of the week's content, with some important areas underexplored.
 - Reflects on prior knowledge but with limited depth or comparison.
 - Identifies future application, though examples may be vague or lacking in detail.
 - Essay is adequately organized, but with a number of writing errors.
 - Needs Improvement (90-104 points per essay):
 - Shows a limited understanding of the week's content, missing key concepts.
 - Provides minimal reflection on prior knowledge, with superficial comparisons.
 - Future application is mentioned but lacks specificity or practical relevance.
 - Essay is poorly organized or has significant writing issues.
 - Unsatisfactory (Below 89 points per essay):
 - Fails to demonstrate an understanding of the week's content.
 - Little to no reflection on prior knowledge or changes in perspective.
 - No clear plan for future application or relevance to managerial career.
- Essay is disorganized, unclear, and contains numerous writing errors. Deadline: December 17, 2024
Format: Submit as a single document, with each essay clearly labeled.

Group Project

Project Overview:

A team of 6-7 people will work together on a group project, which will be presented in the final class on December 11 in front of your peers, McKinsey partners, and the instructor. The project is worth a total of 350 points.

You have two options to conduct this team project. Please choose one among the two:

- Option 1: Discuss the best leadership lessons from the McKinsey leadership course. Provide your team's insights, gained values, and potential suggestions on how to best apply these lessons to your future careers or identify areas for improvement. (5 minutes)
- Option 2: Analyze what leaders can do to win in the market in China. Provide suggestions for a specific company or industry of interest, utilizing insights from the lecture. (5 minutes)

Evaluation Criteria:

Evaluation Process:

*This syllabus is **only** for reference of your course selection, and the finalized version will be distributed by the instructor in class*

- Instructor: 100 points
- McKinsey Partners: 150 points
- Peers (not from the presenting team): 100 points

Note: Each team member should contribute equally to the presentation. The final score will reflect both the group's collective effort and the individual contributions observed during the presentation.

- Outstanding (315-350 points)
 - Clear, well-structured, and highly engaging presentation.
 - Polished and professional delivery.
 - Concise, within the time limit, with effective time management.
 - Highly creative, featuring original ideas and innovative approaches.
 - Effective use of visuals and examples to enhance understanding.
 - Demonstrates deep understanding with well-developed ideas and thorough analysis.
 - Provides insightful and detailed suggestions or recommendations.
 - Comprehensive application of lecture insights, reflecting a profound grasp of the subject matter.
- Excellent (280-314 points)
 - Clear and well-structured presentation with minor areas for improvement.
 - Mostly concise, may slightly exceed the time limit or rush some points.
 - Creative with some original ideas and effective use of visuals and examples.
 - Shows good understanding with well-developed ideas and analysis.
 - Provides clear and relevant suggestions or recommendations.
 - Solid understanding of material with minor gaps in applying lecture insights.
- Satisfactory (245-279 points)
 - Adequate presentation but may lack clarity or engagement.
 - Some organizational issues present.
 - Somewhat concise but may significantly exceed the time limit or feel rushed.
 - Shows some creativity but relies on more conventional ideas and approaches.
 - Demonstrates basic understanding with somewhat developed ideas.
 - Analysis may be superficial; suggestions may lack depth.
 - General understanding of material but struggles to apply insights effectively, with noticeable gaps.
- Needs Improvement (211-244 points)
 - Unclear or poorly structured presentation with significant room for improvement.
 - Presentation is either too brief or too long, affecting content quality.
 - Lacks creativity, with minimal use of visuals or examples.
 - Relies heavily on standard approaches.
 - Demonstrates limited understanding with underdeveloped ideas and minimal analysis.

- Struggles to apply lecture insights effectively, resulting in noticeable gaps.
- Unsatisfactory (below 210 points)
 - Disorganized, unclear presentation that fails to engage the audience.
 - Fails to manage time effectively, significantly over or under the time limit.
 - Unoriginal, with little to no creativity or use of supporting materials.
 - Lacks understanding, with poorly developed ideas and little to no analysis.
 - Fails to demonstrate understanding of the material, with little to no application of lecture insights.

Group Progress Log

To help you better manage your team process and gain a more comprehensive understanding of team dynamics, you will participate in three team project progress logs. Each log will be a brief online survey, distributed at different stages of group project. The responses will be kept confidential. The three logs will contribute a total of 50 points.

Class Schedule (weeks, content, assignments. It can be in the tabular form):

No.	Content	Speakers
1	Course Opening & Overview	Bob Sternfels McKinsey Global Managing Partner; Chong-en Bai Dean, Tsinghua SEM; Joe Ngai Greater China Managing Partner; Mingyu Guan Managing Partner of Beijing Office; Sheng Hong Senior Partner, Corporate Finance Leader
2	Transformation	Karel Eloot Senior Partner Global Metals & Mining practice leader Yongdong Xiang General Manager Power Systems China

Course Description (course objectives and content):

This is an MBA course on the Chinese economy with an emphasis on macroeconomic training. We

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

will focus on macroeconomic and development issues and even puzzles by underscoring the role of macroeconomic theory with Chinese characteristics in guiding our understanding of real economic problems. By taking both historical and international perspectives, we aim to understand the current situation, and hopefully, better forecast future development.

We will explain in detail with convincing but maybe less-known cases why the standard mainstream macroeconomic treatment of economic fluctuation and growth is far from enough for us to make sense of the past, the current, and the future of the Chinese macroeconomy. The course will be taught in a simple way, highlighting economic intuitions rather than complex techniques. Students are not required to have any economic background. Due to its complexity and the time constraints of the teaching schedule, our topics will be highly selective but important ones, including basic facts and the history of the Chinese macroeconomy.

Textbooks & References:

There are no textbooks or references for this course. We will follow closely the lecture notes by the instructor.

Reference Materials:

1. Cohen S S, DeLong J B. Concrete Economics: The Hamilton Approach to Economic Growth and Policy[M]. Harvard Business Review Press, 2016.

Grading (percentage of all the assessment methods involved):

Grading will be based on the following two parts:

1. Class participation (20%)
 - 1) Attendance. (15%)
 - 2) Students are encouraged to raise questions and participate in discussions during the lectures. (5%)
2. Individual final report (80%)
 - 1) Any topics about the Chinese macroeconomy.
 - 2) No required length for the writing. Around 10 to 12 pages would be nice.
 - 3) The deadline is Nov 20th, 2025. Late submission is NOT accepted.

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

No.	Assessment method	Percentage
1	Class participation	20
2	Individual final report	80

Teaching Schedule (weeks, content, assignments. It can be in the tabular form.) :

Week	Content
Week 1 (Lecture 1)	Key Issues on Chinese Macroeconomy; Understanding Chinese Economy through the Lens of GDP.
Week 2 (Lecture 2)	Chinese Development Strategy and Economic Performance; Consumption and Saving; Under-consumption in China; From Internal Imbalances to External Imbalances.
Week 3 (Lecture 3)	External Imbalances and Economic Crisis; A Preliminary Understanding of Fiscal and Monetary Policy; Understanding Money.
Week 5 (Lecture 4)	Interest Rate and Monetary Policy; Monetary Policy and Macroeconomy; The Competing Thoughts Affecting Where China's Economy Is Heading for.

Instructor: ZHAO Yu
Office: B429, Lihua building
E-mail: zhaoyu@sem.tsinghua.edu.cn

Course Description

Course Objectives:

In this course, you will learn and practice the data analysis tools and statistical methods used in marketing research. You will be analyzing data with linear and generalized linear models, where the outcomes of interests include continuous, binary, and additional types of data.

You will be introduced to a wide range of topics about firms and organizations' marketing strategies in the digital economy.

You will have the chance to form groups and design, implement, and track your own marketing campaign and apply the methods learned from this class to evaluate your campaign performance.

Textbooks & References

Tools and Materials:

- Knowledge with a statistical programming software, R will be used as an example.
- Excel will be used for 1~2 in-class case studies and optionally in one assignment.
- Optional textbook: TBD

*This syllabus is **only** for reference of your course selection, and the finalized version will be distributed by the instructor in class*

Grading

- Participation: 20%
- Group assignments: 60%
 - 2 assignments (40% total, 20% each), and
 - term project (20%)
- Final exam – 20%

Teaching Schedule

Week 1: Introduction to Marketing Research

- What is a marketing campaign?
- Common marketing metrics for evaluating campaign effectiveness.
 - Data types: Continuous, binary, count, categorical, ...
- Methods for measuring the effectiveness of a marketing campaign?
 - What is driving the campaign's success (if any)? Are we sure?
 - Observational vs experimental data
- Overview of term project: designing your marketing campaign
 - Who should I target? What outcomes should I track? Will I have enough budget (time and monetary costs) to implement the campaign?
- Assignment 0 (not graded): proposal for your marketing campaign

Week 2: Data analysis I – Randomization, t-tests and Linear Regression

- How to test for randomization?
- Implement t-tests and linear regressions in R or Excel
- How to interpret your results?
- Assignment 1: Rocket Fuel

Week 3: Data analysis II – Binary (0/1) Outcomes

- Linear probability model
- Generalized Linear Model
- Interpreting your results: Marginal effects
- Programming session with R
- Assignment 2: Donations online experiment

Assignment 1 due

Week 4: Censored and truncated outcomes

- A real example: User reviews on Upwork.com
- The latent variable
- The Tobit Model
- Programming session with R

Week 5: Working with Unstructured Data

- Cluster analysis and topic modeling

*This syllabus is **only** for reference of your course selection, and the finalized version will be distributed by the instructor in class*

- o Working with textual data: Word-embedding and Latent Dirichlet model
- o A brief overview of Natural Language Generation (NLG) models

Week 6: Advanced Methods and Emerging Trends in Marketing Research

- o Online advertising and attribution: single-, multi- and last-touch
- o Targeting the long-tail
- o ...

Assignment 2 due

Week 7: Group project presentations

Group project report due

Week 8: Review session for final exam

People analytics *(Course of MiM)*

Course Number: 70511212

Course Name (CH): 人力分析

Course Name (EN): People Analytics

Credits: 2

Prerequisites:

Teaching Language: ☐ CH ☐ CH+EN (EN $\geq$ 50%) ☒ EN

TA's E-mail: hany19@mails.tsinghua.edu.cn; cuizy21@mails.tsinghua.edu.cn

Course Description (course objectives and content):

In the digital economy, rapid technological developments have fundamental transformed the way organizations operate. Over the past two decades, there has been increasing use of data and analytics to make business decisions in many business disciplines (e.g., marketing, finance, accounting, information system). Yet, when it comes to managing people, organizational leaders and decision

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

makers tend to rely on their intuition and personal experience to make decisions, which are often subject to numerous human biases.

Build upon cutting edge research and best people managing practices in some leading global organizations, this course is designed to prepare students to develop a managerial mindset in the digital economy - a mindset that embraces the power of a data-informed approach to people-related decisions. The concept of “*people analytics*” (also referred to as “*talent analytics*,” and similar) refers to a data-driven approach for managing people that overcomes limitations associated with more subjective methodologies (e.g., making decisions based on personal relationships, prior experiences, and/or cognitive biases). To this end, this course will provide students with a foundation in people analytics through lectures, case discussion and hands-on exercises with real world data and tools.

People analytics is a process of creating and using behavioral data to understand and manage organizations. By leveraging insights from constantly generated behavioral data in the organization such as e-mail, IMs, calendar data, performance evaluations, and employee engagement surveys, leaders with a data driven mindset can make better decisions about hiring, managing organizational change, and developing the people in the organization.

I will strive throughout the class to facilitate meaningful discussions and encourage deep critical thinking that emphasize the complexity, outright messiness, and opportunity associated with using people analytics to guide workforce management. By taking this course, students should exit the course with a solid conceptual foundation of people analytics as well as demonstrable skills that can be used to improve outcomes for employees and organizations. Specifically, students are expected to master the following learning objectives:

- Develop a managerial mindset for making data-driven people decisions within an organization
- Understand key principles of improving workplace performance and achieve group objectives through people analytics—the process of using behavioral data to understand and manage organizations
- Develop skills to capture and leverage data that exists within your organization
- Be able to strategically communicate data-informed analyses and solutions to senior leadership

Textbooks & Reference Materials

There is no required textbook for this course. Instead, the course materials include readings, cases, hands on teaching, projects based on real organizational data, and videos to help students master the content of people analytics and develop important skills that they can independently implement data driven decisions.

Grading (percentage of all the assessment methods involved):

No.	Assessment method	Percentage
1	In class participation and discussion, including class attendance,	20%

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

No.	Assessment method	Percentage
	preparation for session discussions, meaningful contribution to in-class discussions	
2	In class case analysis and report. Students will complete some in class assignments and exercises.	5%
3	Individual analysis and reports. Students will complete two individual projects. The first assignment will ask students to design an employee survey to generate behavioral data and conduct analyses to generate managerial insights. The second one will ask students to analyze relational data (social network) and generate managerial insights based on an existing dataset.	40% (20% each)
4	Group analysis and report. Students will work in groups to develop a data-informed report to senior leadership based on a real organizational dataset. Individual score may be adjusted based on peer evaluations. Specifically, in the last class, each group will present a consulting proposal that details the summary, scope, plan, and initial results of the project (20% of the assignment). Each group will submit a full report in PowerPoint format by the end of week 16 (80% of the assignment).	35%

I expect students to take an active role contributing to class discussions. You should come to class prepared to discuss the reading material, ask questions, and engage with other students. My assessment will be based primarily on the quality (versus quantity) of your in-class participation. Beyond your in-class contributions, I will also take into account your classmates' assessments of your contributions to group projects (when applicable), the quality of the constructive feedback you provide to your fellow students, and your general demeanor towards your classmates.

I understand that some students are more comfortable speaking in class than others, so this portion of your grade is not intended to reward extroverted students while punishing soft-spoken students. Rather, it is meant to ensure that all students come to class prepared and willing to contribute to an optimal learning environment.

Students are also expected to complete several individual and team based assignments to help you apply the course content to solving real world problems.

Teaching Schedule (weeks, content, assignments. It can be in the tabular form):

No.	Content	Literature reading	Cases/Materials/Assignments
1	Introduction to the course - Intro to the course. Why do we care? - What are people analytics (PA)?	Why Every Company Needs Evidence-Based Management	Google, Moneyball and others

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

No.	Content	Literature reading	Cases/Materials/ Assignments
	Key logics of people analytics <i>Key takeaway:</i> Understand PA in general	*Big Data, Trying to Build Better Workers	
2	Principles of people analytics - Case discussion - Measurement and performance evaluation (skill or luck, validity, and reliability) - Survey design and psychometrics <i>Key takeaway:</i> Understand measurement and how to conduct an employee survey	*HBR article: How Google Sold Its Engineers on Management HBR: The true measures of success Guide: Run an employee survey	People Analytics at Mckinsey, Case number HBR 9-418-023 Individual Assignment 1 (due in two weeks)
3	Implementing people analytics - Applications of people analytics (recruitment etc) - Making predictions - Research design - SPSS tutorial (T test, ANOVA, correlation, regression) <i>Key takeaway:</i> Learn important PA related methods	Guide: Adopt an analytics mindset Guide: Identify and define your metrics	SPSS tutorial
4	Analyzing relational data I: Social network theory <i>Includes Digital Technology Component</i> - Relational data and analysis - Organizational network analysis applications <i>Key takeaway:</i> understand relational analyses and its implications	HBR: Better People Analytics *HBR: The New Science of Building Great Teams	Class cohort network assessment Group Assignment (due in week 16)
5	Analyzing relational data II: Application <i>Includes Digital Technology Component</i> - Network as social capital - Relational analysis tutorial - Data, indicators, visualization - In class practice <i>Key takeaway:</i> know how to perform relational analyses and learn relevant tools	HBR: How to Build Your Network *HBR: Beyond the Echo Chamber	Network Assessment Exercise, Case number HBR 9-497-002 Network analysis tutorial Individual Assignment 2 (due in two weeks)

This syllabus is **only** for reference of your course selection, and the finalized version will be distributed by the instructor in class

No.	Content	Literature reading	Cases/Materials/ Assignments
6	Pitfalls and caveats - Team presentation - Human decision-making biases - Correlation is not causality - Ethical considerations <i>Includes CSR Component</i> <i>Key takeaway:</i> understand important caveats of PA – what it can do and cannot do	Leaders: Stop confusing correlation with causation *People Analytics: Don't be fooled by data!	Case Study: Should an Algorithm Tell You Who to Promote?
7	Organizational Research Design Comment research method in organizational research		
8	Group project consulting proposal presentation, and discussion <i>Key takeaway:</i> effectively communicate data informed decisions		

* optional

Data Analysis Assignments

In this class, students are required to complete three assignments, including two individual-based and one group based.

- Individual Assignment 1: Students will need to design an employee survey, implement the survey, and analyze the collected data to generate managerial insights. Students will need to obtain at least 50 responses. Deliverable – a report in PowerPoint format.
- Individual Assignment 2: Students will be provided a dataset with relational data. You will be asked to perform necessary analyses and generate managerial insights. Deliverable – a report in PowerPoint format.
- Group project: Students will work in groups to develop a data-informed report to senior leadership based on a real organizational dataset. Individual score may be adjusted based on peer evaluations. Specifically, in the last class, each group will present a consulting proposal that details the summary, scope, plan, and initial results of the project (20% of the assignment). Each group will submit a full report in PowerPoint format by the end of week 16 (80% of the assignment).

Guidance and Grading Criteria for PA Projects

Students’ individual homework, individual based projects and group-based projects will be evaluated primarily based on four criteria, including: (1) the overall logic, (2) the analyses, (3) the interpretation of the results (insights), and (4) managerial recommendations and actions. In addition, the format and the presentation are also important.

1. Explain the logic. For any project, you will need to clearly explain the logic of the project to

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

potential audience (e.g., the boss or a client).

- The purpose of the project – what are the problems that you aim to solve?
- The plan - how are you going to solve the problems
- Explain some key issues such as how the problem is defined, how to measure it, how the data is obtained, what is the timeline, key steps
- what are the key hypotheses (you don't need to list every hypothesis or even propose some formal hypotheses, but it is good to list some directions you will explore and your expectations)
- What kind of analyses will be needed, how will you plan to conduct the analysis, how would you evaluate the results

2. Conduct the Analyses and reporting the results

- Organize the analyses with a clear logic (the story line)
- Rely less on original outputs, original output can be included in an appendix as supplementary materials; key findings can be reorganized and formatted to clarify the presentation
- Creatively present the results
- Use data virtualization
- Be creative, data can be sliced in different ways to generate insights

3. Make sense of the results and interpret the results accurately

- Add notations to the results, accurately interpret and explain the findings (e.g., R^2 , variance explained)
- Point out anomalies and discuss possible reasons, other caveats and pitfalls
- Summarize and make sense of the key findings after some major analyses
- Major findings and key takeaways
- Counterintuitive findings (myth busting) and possible reasons

4. Recommendations and action plans based on the analyses and interpretations

- list key insights
- develop recommendations and managerial implications
- Call for actions
- Nuanced views (point out limitations, risk factors and how to minimize the risks, e.g., try out among a subsample of employees, A/B testing, additional analyses, measure, data, etc)

Technology Strategy (Course of MiM)

Course Number: 80511412
 Course Name (CH): 技术战略
 Course Name (EN): Technology Strategy
 Credits: 2
 Teaching Language: ☐ CH ☐ CH+EN (EN $\geq$ 50%) ☒ EN
 Courseware Language: ☐ CH ☒ EN
 Teaching Method: ☒ lecture ☒ discussion ☒ case study ☐ literature reading

Course Description:

The aim of this course is to examine the driving forces affecting the nature and pace of technological changes and discuss managerial challenges presented by technological innovations. It is designed to provide students with a set of strategic frameworks for analyzing industry dynamics of technological innovation, and help students understand how to formulate and implement technological innovation strategy at firm level. Students who are interested in founding technology-based ventures, managing firms with significant technical content, or working for consulting firms / venture capitals in the

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

future will find this course particularly useful.

This is a 2-credit course and we will meet three hours each time for 11 weeks. The whole course is divided into two modules. The first module examines innovation processes and business context in which technology strategy should be formulated. The second module has a focus on how firms should actually implement their strategy.

The course combines lectures, case analyses, independent readings and student presentations. The reading materials are drawn from research in the management of technological innovation as well as from economics and organizational theory.

Useful References:

Melissa. A. Schilling (2022), Strategic Management of Technological Innovation 7th Edition, McGraw-Hill International Edition.

Grading Policy:

Class Participation	40%
Individual Report	30%
Group Report	30%

Class Participation

Most of your participation grade will be based on attendance on time and contribution during in-class discussions. In case absences are necessary (e.g. due to sickness, interviews, etc.), you have a chance to make up the missed day's participation by reading one of the suggested readings in the missed-week and hand in a two-page memo. These memos should be handed to your TA before class the week after your absence. Also, please let TA know before a class absence if possible.

Individual Assignment:

This assignment is 5-page paper designed to consolidate learning from the first module. In this paper, you will have a chance to analyze the process of technological changes in an industry of your choice.

Group Assignments:

The group project should be completed in teams of no more than four people. It consists of an in-depth exploration of technology strategy in a particular technology firm. Each group should deliver a 10-page written report and present their analysis in the last class.

Teaching Schedule:

WEEK	TOPICS	REQUIRED READINGS
1	Introduction	Reevaluating incremental innovation. HBR 2018. What evolution can teach us about innovation, HBR 2021. Unleash the Unexpected for Radical Innovation, SMR 2023. The Middle Path to Innovation, HBR 2024.

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

WEEK	TOPICS	REQUIRED READINGS
3	S-Curves	The Prius Approach. HBR 2015. The hybrid trap: Why most efforts to bridge old and new technology miss the mark. SMR 2018.
4	Disruptive Innovations	The new disrupters, SMR 2021. Innovation Doesn't Have to Be Disruptive, HBR 2023.
5	Standards Battles	Case: HD-DVD vs. Blu-Ray
6	Ecosystems & Platforms	In the ecosystem economy, what's your strategy, HBR 2019. The future of platforms, SMR 2020. How to Turn a Supply Chain Platform into an Innovation Engine - Lessons from Haier. HBR 2022.
7	Innovation in China	China's new innovation advantage, HBR 2021. Why Innovators in China Stay Close to the Market. SMR 2022.
8	R&D Strategy	Why innovation's future isn't (just) open, SMR 2020. A New Approach to Strategic Innovation Portfolio, HBR 2023.
9	Collaboration Strategy	Competing through joint innovation. SMR 2017. The Legacy Company's Guide to Innovation, HBR 2024. Nurturing Innovation, HBR 2024.

Instructor: ZHU Wentao

Course Description:

There are 32 class hours in this course. This course is set for exchange students and International visiting students. When finish this course, you can improve your Chinese on the following aspects.

1. Master pinyin by learning pinyin, initials, finals, tones, strokes and radicals.
2. Can write some characters after learning strokes, radicals, and writing principals.
3. Master Chinese basic grammars and practice.
4. Learn daily communication topics, and can talking about these topics with others.
5. Read the essays related to the vocabularies and grammars already learned.
6. Learn how to write a short article with the words and grammars just learned, and the topics are related to characters introduction, family introduction, hobbies and so on.

This course is suitable for students who did not pass the HSK-Level 1 (Hanyu Shuiping Kaoshi) exam or study in Chinese for less than 48 class hours.

Pre-intermediate Chinese B

Instructor: GUO Zhen

Course Description

There are 32 class hours in this course. This course is set for exchange students and International visiting students. When finish this course, you can improve your Chinese on the following aspects. 1. Master more difficult and complicated characters and vocabularies.

2. Can use more formal vocabularies and expressions, and Know differences of similar words, and use it in right way.

3. Master more complicated but frequently used grammars.

4. Improve faster by intensive practice. Because the difficulty increases, students' passion for learning Chinese will be influenced, so this kind of intensive practice is necessary and effective.

5. Read longer and complicated essays to help students understand and taste the differences between elementary level and pre-intermediate level.

6. Master the detailed and dedicate description for persons, for example characteristics, looks, mental activity, interest and so on.

7. Know how to describe places and the similarities and differences among different places, for example scenery, customs and so on.

This course is suitable for students who meet following conditions:

1. have a good knowledge of 600-800 Chinese vocabulary,

2. pass the HSK-Level 2 exam or study in Chinese for at least 48 class hours.

This syllabus is only for reference of your course selection, and the finalized version will be distributed by the instructor in class

Intermediate Chinese

Course Number:	64203052

Target Students:	☐ Undergraduate ☐ Master ☐ PhD ☒ MBA ☐ EMBA ☐ TIEMBA

Instructor: DAI Yunjuan

Course Description

This course is open to all international graduate students and is specialized in offering a Chinese Language curriculum for intermediate levels. The course focuses on each of the language skills listening, speaking, reading, writing and translation. Within the course, increased text-based teaching, strong foundations in reading articles and explanations of complex words and sentence patterns leads to students gradually engaging with the style of formal written language.

The course is suitable for students who meet at least one of the following conditions:

1. have a good knowledge of 1800-2000 Chinese vocabulary
2. study in Chinese for at least 100 class hours
3. pass the HSK-Level 3 (or above) exam
